## Class test final year (july)

## Mcas

| 1) 2 years old child came with history of diarrhea for 3 days child is irritable and taking ORS.he | e has sunken eyes.his |
|--|-----------------------|
| BP is 90/60 mmhg According to IMNCI child comes under classification of                            |                       |

|        | Mode | rate | der | iydri | ation |
|--------|------|------|-----|-------|-------|
| $\sim$ |      |      |     |       |       |

- (b) Some dehydration
- c) Severe dehydration
- d) No dehydration
- e) Mild dehydration
- 2) 3 YEARS old child having complaints of vomiting and loose motions for 4 days.o/e patient is dehydrated and having distended abdomen.his labs shows.

Na= 140 meq/lit

K = 2.5 mea/lit

What will be ECG findings in this patient

- a) Prolong QRS complex
- b) Elevation of ST segment
- c) large U waves
- d) Prolong QT
- e) High voltage I waves
- 3) 4 years old child came to a doctor sitting at THQ with history of fever for 5 days and rash for 2 days.one of his cousin has same rash 1 week ago patient has abdominal pain and having vomiting he is unable to take anything. How you will manage the patient
- a) Give IV antibiotics
- b) )Ggive oral vitamin A
- c). Give iv ondensteron
- d) Give iv antibiotic, treat hypoglycemia and refer patient
- e) Admit patient in THQ

4) 3 years old child came in ER with respiratory distress for 1 day he has cough for 1 week.o/e there are bilateral crepitations.his abgs shows

Ph 7.25 PO2=85% PCO2 60 mmhg

HCO3=35 meq/lit what does this abgs shows

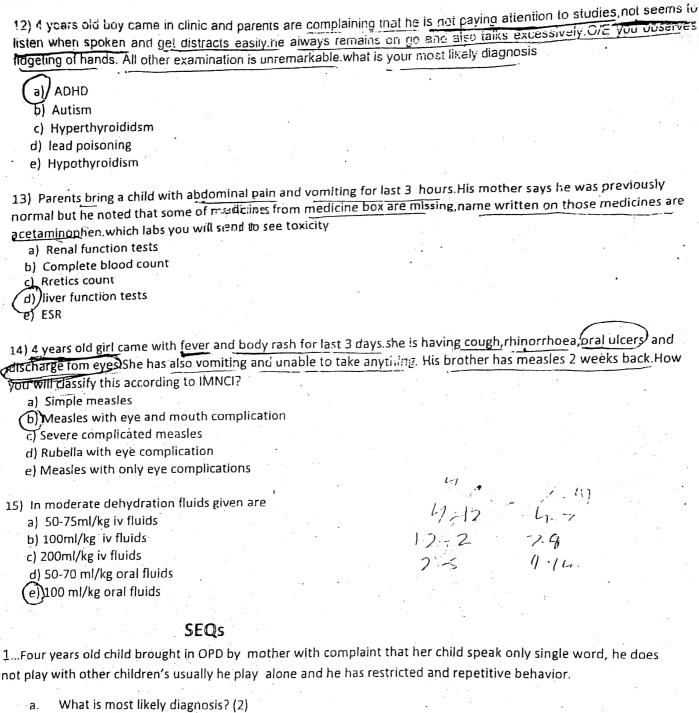

a) Type 1 respiratory failure

35-451

23-301

- b) Type 2 respiratory failure
- c) Severe metabolic aciodosis
- d) Severe respiratory acidosis
- (e) Compensated respiratory acidosis
- 5) 7 years old boy came to opd with history of fever and throat pain for 4 days o/e bilalteral tonsils are enlarged and cervical (ymph nodes are tender and enlarged. How you will treat this patient?
- a) Refer urgently
- b) Give benzathine penicillin
- c) Give multivitamins to patient
- d) Admit the patient in hospital
- e) Give iv fluids to patient

| h A   | ears old girl came in ENT opd with history of pus coming from right ear for 10 days is also febrile. O/E there is tender swelling behind right ear how will you classify patient   |  |
|---|--|--|
| (A)   | Acute ear infection  |  |
|   | Chronic ear infection  |  |
|   | Persistant ear infection   |  |
|   | Mastoiditis  |  |
| e)  | Simple ear infection -   |  |
| sing  | 4years old child comes to you with complaint of <u>delayed speech</u> . According to mother he meaningful word but his hearing is intact. He is not friendly with others and preferrite toy. On clinical examination his growth parameters are normal with normal motor skiper eye contact. Among which of the following is the most likely diagnosis?   | S to play alone with   |
| ,   | a) Attention deficit hyperactive disorder  | .,   |
| _   | Attention deficit hyperactive disorder     Autism  |  |
| _   | c) Dyslexia  |  |
|   | d) Encopresis  |  |
|   | e) Hypothyroidism  | •<br>• • • • • • • • • • • • • • • • • • •   |
|   |  | bloody diarrhea after 2  |
| -hours  | nree years old child was brought to E/R with H/O abdominal pain, nausea, vomiting and soft ingestion of medication which was taken by her mother during pregnancy. On examin tooking and dehydrated, all of the following are the measures to treat this condition except  |  |
| 16  | ) Use pica   | *<br>*   |
|   | Do stomach wash  |  |
|   | 6 - Alicate of phosphal  |  |

- not play with other children's usually he play alone and he has restricted and repetitive behavior.

  - How will you manage this patient?(3)
- 2...Five years old child was brought to emergency with history of unable to move his whole left side of the body since one day along with h/o high grade fever and vomiting .on examination the child is sick looking, febrile, on left side power is 3/5, reflexes are brisk and planters are up going, on right side tone, power and reflexes are normal further examination reveals central cyanosis and an ejection systolic murmur close to left upper sternal border. X ray chest reveals reduced vascular shadows in the lungs bilaterally.
  - What is the most likely diagnosis? (1)
  - b. How will you investigate this patient? (2)
  - Write down the acute and long term management? (2)
